Global Warming May 03 2020 Global Warming: Engineering Solutions goes beyond the discussion of what global warming is, and offers complete concrete solutions that can be used to help prevent global warming. Innovative engineering solutions are needed to reduce the effects of global warming. Discussed here are proposed engineering solutions for reducing global warming resulting from carbon dioxide pollution, poor energy and environment policies and emission pollution. Solutions discussed include but are not limited to: energy conversion technologies and their advantages, energy management and conservation, energy saving and energy security, renewable and sustainable energy technologies, emission reduction, sustainable development; pollution control and measures, policy development, global energy stability and sustainability.

SOFC Modelling and Parameter Identification by Means of Impedance Spectroscopy Sep 26 2019 A high resolution electrochemical impedance spectroscopy study on anode supported single cells (ASC) is presented. The cells were characterised over a broad range of operating conditions, including different temperatures, current densities and various cathode and anode gas compositions. The analysis of the distribution of relaxation times combined with the numeric accuracy of a CNLS fit enabled the identification of five different processes contributing to the total polarisation loss of an ASC.

Relics of the Franklin Expedition Oct 20 2021 Sir John Franklin's Arctic expedition departed England in 1845 with two Royal Navy bomb vessels, 129 men and three years' worth of provisions. None were seen again until nearly a decade later, when their bleached bones, broken instruments, books, papers and personal effects began to be recovered on Canada's King William Island. These relics have since had a life of their own--photographed, analyzed, cataloged and displayed in glass cases in London. This book gives a definitive history of their preservation and exhibition from the Victorian era to the present, richly illustrated with period engravings and photographs, many never before published. Appendices provide the first comprehensive accounting of all expedition relics recovered prior to the 2014 discovery of Franklin's ship HMS Erebus.

Business Practice in Socialist Hungary, Volume 1 Jul 25 2019 This study aims to reconstruct the activities of enterprises and individuals over two decades in one developing country (Hungary), within and across four politico-economic domains (agriculture, infrastructure/construction, commerce, and manufacturing), from the initial Stalinist obsession with heavy industry (Volume 1: Creating the Theft Economy, 1945-1957) through later reforms paying greater attention to profitable farming and the provision of abundant consumer goods (Volume 2: From Chaos to Contradiction, 1957-1972, forthcoming 2023). It provides hundreds of grounded, granular stories for reflection, as reported by actors and direct observers, ranging from innovation and improvisation to obstruction, failure, and fraud. Further, it offers an otherwise-unobtainable close encounter with another world, familiar in some respects while amazingly peculiar in others. The social history of enterprise and work in postwar Central European nations "building socialism" has long been underdeveloped. Through extensive macro-level research on planning and policy in Hungary, Poland, Czechoslovakia, and other Bloc countries, a grand narrative has been framed: reconstruction and breakneck industrialization under Soviet tutelage; then eventual mismanagement, stagnation and crisis, leading to collapse. This book seeks to explore what socialism actually looked like to those sustaining (or enduring) it as they faced forward into an unknowable future, to assess how and where it did (or didn't) work, and to recount how ordinary people responded to its opportunities and constraints. This study will appeal to readers interested in understanding how businesses worked day-to-day in a planned economy, how enterprise practices and technological strategies shifted during the first postwar generation, how novice managers and technicians emerged during rapid industrialization, how peasants learned to farm cooperatively, how organizations improvised and adapted, how political purity and practical expertise contended for control, and how the controversies and convulsions of the postwar decades shaped a deeply flawed project to "build socialism."

Beethoven's Orchestral Music Jan 11 2021 Beethoven's orchestral works include some of the most iconic pieces of music ever written. Veteran music critic David Hurwitz surveys all of the symphonies, overtures, concertos, theatrical music, his single ballet and other music for the dance, and several short pieces. It also features extensive discographies and recommended recordings.

Sustainable Intensification of Organic and Low-Input Agriculture through Integrated Bioenergy Production Apr 01 2020 Both global food and energy systems are increasingly faced with major challenges regarding food security and non-fossil energy provision, respectively. Organic or low-input agriculture as well as bioenergy production may contribute to securing rising food and energy needs. However, low-input agricultural systems are challenged for their lower productivity compared to high-input systems. Moreover, bioenergy systems are often criticized for their unsustainable high-input cropping systems. Consequently, innovative approaches are needed to optimize both sectors. A promising strategy may be the integration of organic or low-input agricultural systems with agricultural bioenergy production with the objective to increase both productivity and sustainability of land use systems. This dissertation examines the opportunities and risks of integrated bioenergy production in organic and low-input agricultural systems, based on the example of two bioenergy technologies, anaerobic digestion (AD) and integrated generation of solid fuel and biogas from biomass (IFBB), by assessment of their structural framework conditions, systematic implications, as well as economic and risk performance. In a final step, the role of integrated agricultural bioenergy production within the context of the so-called sustainable intensification is debated.

Multipactor in Accelerating Cavities Aug 25 2019 This book is written by two world-recognized experts in radio frequency (RF) systems for particle accelerators and is based on many years of experience in dealing with the multipactor phenomenon. The authors introduce and review multipactor in RF cavities for scientists and engineers working in the field of accelerator

physics and technology. The multipactor phenomenon of unintended electron avalanches occurs in the RF cavities commonly and quite often is a performance-limiting factor. The book starts with an Introductory Overview which contains historical observations and brief description of most common aspects of the phenomenon. Part I deals with the multipactor in a flat gap. It starts with description of the dynamics of electrons, derivation of the stability condition and analyzing influence of several factors on the multipactor. Then, the initial considerations are extended to derive a generalized phase stability and finally a particular case, called ping-pong multipacting, is considered. The part one is concluded with a brief review of computer codes used in multipactor simulations. Part II is dedicated to the multipactor in crossed RF fields, the typical situation in accelerating cavities. Two cases of MP are considered: a two-point multipactor near the cavity equator in elliptical cavities and a one-point multipactor. Part III describes optimization of the cavity shapes geared toward designing multipactor-free structures. The book will serve as an importance reference on multipactor for those involved in developing and operating radio frequency cavities for particle accelerators.

The Cadillac Northstar V-8 Sep 18 2021 Cadillac has had a long history in the automotive marketplace as General Motors' luxury car division. During the 1980s, Cadillac's management wanted to reestablish the brand as a leader in sophistication, innovation, refinement and prestige. Engineers conceived a new dual-overhead cam, four-valve-per-cylinder V-8 engine—the Northstar. This power plant was the heart of Cadillac's Northstar System, which included a greatly improved suspension and braking system. The division redesigned its entire line to incorporate these new technologies for the 1990s and beyond. The Northstar was the last engine designed and built by Cadillac before the 2005 establishment of GM Powertrain, which took over engine design for all GM divisions. This history of the Northstar V-8 and the cars it powered covers the first generation front-wheel drive Northstar, the second generation rear-wheel drive model, and the supercharged version, along with racing history and the most collectible Northstar-powered Cadillacs.

Dark Deeds Down Under Dec 10 2020 A vibrant southern constellation of crime writers. Dark Deeds Down Under features the very best of modern Australian and New Zealand crime and mystery writing. Spend time with some of your favourite Aussie and Kiwi cops, sleuths and accidental heroes, and meet some edgy new investigators. A crew of beloved series characters - Corinna Chapman, Hirsch, Sam Shephard, Rowly Sinclair, Nick Chester, Murray Whelan - will lead you down dark alleys to meet our newer heroes - the Nancys, Penny Yee and Matiu, Alex Clayton, Kate Miles - and the stars of some cracking standalone tales. Travel the criminal trails of two countries. From the dusty Outback to South Island glaciers, from ocean-carved coastlines and craggy mountains to sultry rainforests or Middle Earth valleys, and via sleepy towns to the seething underbellies of our cosmopolitan cities. The 19 dark deeds herein are perpetrated by: Alan Carter - Nikki Crutchley - Aoife Clifford - Garry Disher - Helen Vivienne Fletcher - Lisa Fuller - Sulari Gentill - Kerry Greenwood - Narrelle M. Harris - Katherine Kovacic - Shane Maloney - R.W.R. McDonald - Dinuka McKenzie - Dan Rabarts & Lee Murray - Renee - Stephen Ross - Fiona Sussman - Vanda Symon - David Whish-Wilson 'Punchy plotlines, contemporary themes, and familiar settings - you can't go wrong with this eclectic mix. Dip in and discover some new favourite writers.' - Michael Robotham 'A perfect showcase for the brilliant new wave of Antipodean crime writing.' - Val McDermid
