Power Generation from Solid Fuels Jul 09 2020 Power Generation from Solid Fuels introduces the different technologies to produce heat and power from solid fossil (hard coal, brown coal) and renewable (biomass, waste) fuels, such as combustion and gasification, steam power plants and combined cycles etc. The book discusses technologies with regard to their efficiency, emissions, operational behavior, residues and costs. Besides proven state of the art processes, the focus is on the potential of new technologies currently under development or demonstration. The main motivation of the book is to explain the technical possibilities for reducing CO₂ emissions from solid fuels. The strategies which are treated are: more efficient power and heat generation technologies, processes for the utilisation of renewable solid fuels, such as biomass and waste, and technologies for carbon capture and storage. Power Generation from Solid Fuels provides, both to academia and industry, a concise treatment of industrial combustion of all types of solid, hopefully inspiring the next generation of engineers and scientists.

Engineering and Chemical Thermodynamics Sep 10 2020 Chemical engineers face the challenge of learning the difficult concept and application of entropy and the 2nd Law of Thermodynamics. By following a visual approach and offering qualitative discussions of the role of molecular interactions, Koretsky helps them understand and visualize thermodynamics. Highlighted examples show how the material is applied in the real world. Expanded coverage includes biological content and examples, the Equation of State approach for both liquid and vapor phases in VLE, and the practical side of the 2nd Law. Engineers will then be able to use this resource as the basis for more advanced concepts.

A Survival Guide for Research Scientists Dec 26 2021 Research scientists play a pivotal role in society. Their passion for science will drive them forward, leading to new discoveries that will ultimately make the world a better place. Unfortunately, as the professional environment becomes more and more competitive, research scientists today cannot just rely on technical knowledge to carve successful careers. The Golden Book of Chemistry Experiments Oct 31 2019 BANNED: The Golden Book of Chemistry

Experiments was a children's chemistry book written in the 1960s by Robert Brent and illustrated by Harry Lazarus, showing how to set up your own home laboratory and conduct over 200 experiments. The book is controversial, as many of the experiments contained in the book are now considered too dangerous for the general public. There are apparently only 126 copies of this book in libraries worldwide. Despite this, it's known as one of the best DIY chemistry books ever published. The book was a source of inspiration to David Hahn, nicknamed "the Radioactive Boy Scout" by the media, who tried to collect a sample of every chemical element and also built a model nuclear reactor (nuclear reactions however are not covered in this book), which led to the involvement of the authorities. On the other hand, it has also been the inspiration for many children who went on to get advanced degrees and productive chemical careers in industry or academia.

Ostrava and Its Jews Oct 12 2020 The story of Ostrava and its Jews encapsulates in a small space (85 square miles) and a short time (ca. 150 years) a miniaturized history of Central Europe. It covers industrialization and massive economic growth, immigration and emigration, intolerance and tolerance, multi-culturalism and nationalism, high culture and social welfare, the Holocaust, communism and the diaspora. The book draws on family histories and eye-witness accounts, many unpublished. In 2005 members of Kingston Synagogue became interested in the origins of a Sefer Torah from Ostrava, housed there many years earlier. This research project, led initially by David Lawson, grew to include the Czech historian Hana Sustkova and Czech genealogist Libuse Salomonovicova. As their research progressed, a lively online community developed, reestablishing contacts between families from Sweden to Australia, and South America to Canada. In effect, resurrecting Jewish Ostrava in virtual and actual reality. The overarching theme is how, in a short time, immigrants-in this case Jews-transformed a small conservative market town into a vibrant, tolerant, caring, economic, and cultural powerhouse; how it was destroyed almost overnight by bigotry and intolerance; and to ask how far the Ostrava story can provide lessons or guidance on 21st century political issues.
