NAFTA 2.0 May 19 2021 The renegotiation and possible termination of the North American Free Trade Agreement (NAFTA) sparked a lot of interest and concern in light of the United States' declared objective to "rebalance the benefits" of the agreement. This edited book provides an overview of the changes brought to the NAFTA by the United States-Mexico-Canada Agreement (USMCA) or NAFTA 2.0. Grouping leading academics and experts from the three countries, the book covers the major topics in the transition from the NAFTA to the USMCA. The book also sheds light on the evolution of North American economic integration within the past three decades and reflects on the significance of the regional integration model represented by the NAFTA and now the USMCA. The book is aimed at scholars, students, officials, professionals and interested citizens concerned by the big issues surrounding North American integration and economic globalization.

Gold Coins of the World - 9th edition Sep 30 2019 A unique and indispensable reference work Unsurpassed in content and scope When the first edition of Gold Coins of the World made its debut in 1958, it forever changed the way gold coins were collected, cataloged, traded, and priced. For the first time, one book provided a reliable guide for a subject which previously required an often expensive investment in multiple volumes of literature, some of it rare and antique, and much of it badly out-of-date. With the publication of this pioneering work, Robert Friedberg (1912-1963) established himself as an international icon in the field of numismatic literature. This book, and the 'Friedberg Numbering System' he developed became then, and is still today, the internationally-recognized standard for systematically identifying any gold coin ever made. From just 384 pages in 1958, Gold Coins of the World has expanded to the extent that it now contains more than triple the information of its ancestor. It still stands alone as the first and only book to describe, catalog and price two millennia of gold, platinum, and palladium coin issues from across the globe. From the first coins of the ancient Greeks to the most recently-issued modern commemoratives, they are all here, an astonishing compilation of more than 21,000 individual coin listings accompanied by over 8,000 actual-size photographs. The prices have been completely updated, for the most part raised substantially, to reflect the current market. Entire sections have been expanded, many illustrations have been added or improved, and hundreds of new discoveries and recent issues have been included for the first time. Arthur Friedberg, president of the International Association of Professional Numismatists from 2001 to 2007 and now its Honorary President, and Ira Friedberg, have completely revised and expanded their late father's work. They have had the valuable assistance and cooperation of a who's who of the leading numismatists on every continent in bringing this edition to fruition. For the numismatist, banker, economist, historian, institution of higher learning, or a fancier of the noble metal in all its forms, Gold Coins of the World is a book for every library, public and private.

Colour and Light in the Ocean Aug 02 2022 CLEO publications in Frontiers in Marine Science Foreword Josef Aschbacher, Director of ESA's Earth Observation Programmes Satellite data have drastically changed the view we have of the oceans. Covering about 70% of Earth's surface, oceans play a unique role for our planet and for our life – but large areas remain unexplored and are difficult to reach. Since the 1980s, Earth-orbiting satellites have helped to observe what is happening at the ocean surface. Sensors like CZCS, AVHRR, SeaWifs and MODIS provided the first ocean colour data from space. Starting in 2002, ESA's Medium

Resolution Imaging Spectrometer (MERIS) on-board the environmental satellite Envisat, provided detailed information on phytoplankton biomass and concentrations of other matter in the global oceans. These satellite observations laid the groundwork for studying the marine environment and how it responds to climate change, and the research community has since delivered information on the variability of marine ecosystems. Part of this work is reflected in this stunning collection of peer-reviewed publications presented at the workshop, Colour and Light in the Ocean from Earth Observation (CLEO), held at ESA's ESRIN site in Frascati, Italy, on 6–8 September 2016. The event attracted more than 160 participants from all over the world, including remote sensing experts, marine ecosystem modelers, in-situ observers and users of Earth observation data. Scientifically, the meeting covered applications in climate studies over primary productivity and ocean dynamics, to pools of carbon and phytoplankton diversity at global and regional scales. It also demonstrated the potential of Earth observation and its contribution to modern oceanography. Looking to the future, new satellites developed by ESA under the coordination of the European Commission will further our scientific and operational observations of the seas. With Sentinel-3A in orbit and its twin Sentinel-3B following in 2017, there is a new category of data available for operational oceanographic applications and climate studies for years to come. These data are free and easy to access by anyone interested. Looking at the role of oceans in our daily lives, I am sure that this collection of scientific excellence will be valued by scientists of today and will inspire the next generation to carry these ideas into the future.

The History and Politics of Star Wars Jun 27 2019 This book provides the first detailed and comprehensive examination of all the materials making up the Star Wars franchise relating to the portrayal and representation of real-world history and politics. Drawing on a variety of sources, including films, published interviews with directors and actors, novels, comics, and computer games, this volume explores the ways in which historical and contemporary events have been repurposed within Star Wars. It focuses on key themes such as fascism and the Galactic Empire, the failures of democracy, the portrayal of warfare, the morality of the Jedi, and the representations of sex, gender, and race. Through these themes, this study highlights the impacts of the fall of the Soviet Union, the War on Terror, and the failures of the United Nations upon the 'galaxy far, far away'. By analysing and understanding these events and their portrayal within Star Wars, it shows how the most popular media franchise in existence aims to speak about wider contemporary events and issues. The History and Politics of Star Wars is useful for upper-level undergraduates, postgraduates, and scholars of a variety of disciplines such as transmedia studies, science fiction, cultural studies, and world history and politics in the twentieth and twenty-first centuries.

????“????????”???????????? **Finding a Way to Avoid the Middle-Income Trap: The Cases of China and Peru** Feb 25 2022 This book summarizes and compares the key ideas from the Chinese and Peruvian cases across various important topics to study the middle-income trap, such as the main driving forces of a potential trap in each case; the common challenges and the main differences in the economic transitions; the different issues faced as a result of the opening-up of China and Peru; the differences and coincidences between their respective regional development processes and the key role of human capital in avoiding the middle-income trap at regional level; the importance of infrastructure investments; the role of innovation for China's future growth versus the limitations that informality places on the capacity of formal firms to innovate in Peru, among other issues. On the whole, this academic effort by Chinese and Peruvian scholars will contribute to mutual understanding and to enlarging cooperation from both sides.

Global Financial Conditions and Monetary Policy Autonomy Feb 13 2021 Is the Mundell-Fleming trilemma alive and well? International co-movement of asset prices takes place alongside synchronized business cycles, complicating the identification of financial spillovers and assessments of monetary policy autonomy. A benchmark for interest rate comovement is to impose the null hypothesis that central banks respond only to the outlook for domestic inflation and output. We show that common approaches used to estimate interest rate spillovers tend to understate the degree of monetary autonomy enjoyed by small open economies with flexible exchange rates. We propose an empirical strategy that partials out those spillovers that are associated with impaired monetary autonomy. Using this approach, we revisit the predictions of the trilemma and find more compelling evidence that flexible exchange rates deliver monetary autonomy than prior work has suggested.

African Paleoecology and Human Evolution Sep 10 2020 Humans evolved in the dynamic landscapes of Africa under conditions of pronounced climatic, geological and environmental change during the past 7 million years. This book brings together detailed records of the paleontological and archaeological sites in Africa that provide the basic evidence for understanding the environments in which we evolved. Chapters cover specific sites, with comprehensive accounts of their geology, paleontology, paleobotany, and their ecological significance for our evolution. Other chapters provide important regional syntheses of past ecological conditions. This book is unique in merging a broad geographic scope (all of Africa) and deep time framework (the past 7 million years) in discussing the geological context and paleontological records of our evolution and that of organisms that evolved alongside our ancestors. It will offer important insights to anyone interested in human evolution, including researchers and graduate students in paleontology, archaeology, anthropology and geology.

Process Plant Layout Apr 17 2021 Process Plant Layout, Second Edition, explains the methodologies used by professional designers to layout process equipment and pipework, plots, plants, sites, and their corresponding environmental features in a safe, economical way. It is supported with tables of separation distances, rules of thumb, and codes of practice and standards. The book includes more than seventy-five case studies on what can go wrong when layout is not properly considered. Sean Moran has thoroughly rewritten and re-illustrated this book to reflect advances in technology and best practices, for example, changes in how designers balance layout density with cost, operability, and safety considerations. The content covers the 'why' underlying process design company guidelines, providing a firm foundation for career growth for process design engineers. It

is ideal for process plant designers in contracting, consultancy, and for operating companies at all stages of their careers, and is also of importance for operations and maintenance staff involved with a new build, guiding them through plot plan reviews. Based on interviews with over 200 professional process plant designers Explains multiple plant layout methodologies used by professional process engineers, piping engineers, and process architects Includes advice on how to choose and use the latest CAD tools for plant layout Ensures that all methodologies integrate to comply with worldwide risk management legislation

The Effects and Consequences of Migration and Immigration on the Lebanese Economy and Tourism Sector Jun 19 2021 This book tackles several important and timely topics with regards to Lebanon, especially after the Syrian conflict. The contributions here analyse the situation of the internal and external Lebanese economy and tourism, and shed light on the causes and effects of migration and immigration. The articles provide detailed insight into private and public policies, and offer a holistic analysis that enables the reader to benefit from their suggested recommendations. The book can be used as a reference book for scholars and practitioners in the public and private sectors interested in Middle Eastern politics, economics forecasting, marketing and tourism studies. The articles were originally presented and discussed at the Second Local Economics and Tourism Conference held in May 2017 at the Lebanese International University.

Caribbean Art Jul 29 2019 Caribbean Art presents and discusses the diverse, fascinating and highly accomplished work of Caribbean artists, whether indigenous or from the diaspora, popular or high culture, rural or urban based, politically radical or religious. This expanded edition has a new preface, and has been updated to reflect on recent challenges to the ideological premises and institutions of conventional art-historical practice and their connections to histories of colonialism, Eurocentricity and race. Two new chapters focus on public monuments linked to the history of the Caribbean, and the intersections between art and tourism, raising important questions about cultural representation. Featuring the work of internationally recognized artists such as Sonia Boyce, Christopher Cozier, Wifredo Lam, Ana Mendieta, Ebony G. Patterson, Hervé Télémaque, and more than 100 others working across a variety of media, this new edition makes an important contribution to the understanding of Caribbean art and its context, in ways that invite and encourage further explorations on the subject.

From Radio to Television Sep 03 2022 The early years of television relied in part on successful narratives of another medium, as studios adapted radio programs like Boston Blackie and Defense Attorney to the small screen. Many shows were adapted more than once, like the radio program Blondie, which inspired six television adaptations and 28 theatrical films. These are but a few of the 1,164 programs covered in this volume. Each program entry contains a detailed story line, years of broadcast, performer and character casts and principal production credits where possible. Two appendices ("Almost a Transition" and "Television to Radio") and a performer's index conclude the book. This first-of-its-kind encyclopedia covers many little-known programs that have rarely been discussed in print (e.g., Real George, based on Me and Janie; Volume One, based on Quiet, Please; and Galaxy, based on X Minus One). Covered programs include The Great Gildersleeve, Howdy Doody, My Friend Irma, My Little Margie, Space Patrol and Vic and Sade.
