Principles of Practice in Multi-Agent Systems Nov 12 2020 Agents are software processes that perceive and act in an environment, processing their perceptions to make intelligent decisions about actions to achieve their goals. Multi-agent systems have multiple agents that work in the same environment to achieve either joint or conflicting goals. Agent computing and technology is an exciting, emerging paradigm expected to play a key role in many society-changing practices from disaster response to manufacturing to agriculture. Agent and multi-agent researchers are focused on building working systems that bring together a broad range of technical areas from market theory to software engineering to user interfaces. Agent systems are expected to operate in real-world environments, with all the challenges complex environments present. After 11 successful PRIMA workshops/conferences (Pacific-Rim International Conference/Workshop on Multi-Agents), PRIMA became a new conference titled "International Conference on Principles of Practice in Multi-Agent Systems" in 2009. With over 100 submissions, an acceptance rate for full papers of 25% and 50% for posters, a demonstration session, an industry track, a RoboCup competition and workshops and tutorials, PRIMA has become an important venue for multi-agent research. Papers submitted are from all parts of the world, though with a higher representation of Pacific Rim countries than other major multi-agent research forums. This volume presents 34 high-quality and exciting technical papers on multimedia research and an additional 18 poster papers that give brief views on exciting research.

Campaigning in a Racially Diversifying America Jan 27 2022 As the voting public continues to diversify across the United States, political candidates, and particularly white candidates,

increasingly recognize the importance of making appeals to voters who do not look like themselves. As history has shown, this has been accomplished with varying degrees of success. During the 2016 election, for example, both Hillary Clinton and Bernie Sanders campaigned vociferously among Latino voters in Nevada's early primary, where nineteen percent of the Democratic caucus consisted of Latinos. Clinton released a campaign message to these voters stating that she was just like their abuela (or grandmother). The message, widely panned, came across as insincere, and Clinton, who otherwise performed well among Latinos nationally, lost by a wide margin to Sanders. On the other hand, in 2013, Bill de Blasio, campaigning for mayor of New York City, appeared with his black son in a commercial aimed against stop and frisk policies. His appeal came across as authentic, and he received a high level of support among black voters. In *Campaigning in a Racially Diversifying America*, Loren Collingwood develops a theory of Cross-Racial Electoral Mobilization (CRM) to explain why, when, and how candidates of one race or ethnicity act to mobilize voters of another race or ethnicity. Specifically, Collingwood examines how and when white candidates mobilize Latino voters, and why some candidates are more successful than others. He argues that candidates strategize by weighing the potential costs and benefits of conducting CRM based on the size of the minority electorate (the benefit) and the overall level of white racial hostility (the cost). Extensive cross-racial mobilization is most likely to occur when elections are competitive, institutional barriers to the vote are low, candidates have previously developed a welcoming racial reputation with target voters, whites' attitudes are racially liberal, and the Latino electorate is large and growing. Moreover, candidates who can demonstrate cultural competence and do so repeatedly are much more likely to be successful at making such appeals. The book looks at CRM trends and case studies over the past seventy years to gauge how politics in various places have changed as the American electorate has diversified. It draws on the author's research in over thirty archives in nine states, candidate and survey data, and experimental approaches to assess causality in voter responses to candidate behavior.

Doorstep Democracy Feb 02 2020 The famous Tip O'Neill axiom "all politics is local" comes alive in this chronicle of Democrat James H. Read's hard-fought but unsuccessful--by 98 votes--bid for state legislature in the socially conservative communities of Stearns and Morrison Counties, Minnesota. Read door-knocked 7,500 households during his campaign, visiting with voters and engaging in genuine dialogue on doorsteps from St. Anthony to St. Joseph. At once a memoir of a hard-fought contest and a meditation on the state of American democracy, Read's work contrasts the modern media-driven political campaign, where candidates glean their knowledge of voters from pollsters and communication only flows one way, with the kind of true understanding of constituents and issues that can only grow from individual encounters. Face-to-face doorstep conversations, he claims, give a candidate (or volunteer) and voter an opportunity to truly persuade and learn from one another. In a district where the pro-life movement dominated politics, Read's invitation to honestly discuss abortion and reject single-issue politics resonated with many voters. Refusing the "red state" versus "blue state" view of American voters, Doorstep Democracy shows the power and importance of kitchen-table politics--people sitting down together to tackle the issues that affect us--and proves that voters and candidates can be convinced to change their minds. Read ultimately demonstrates how conversations between citizens concerned about their communities can get us beyond the television ads, mass mailings, and sound bites to rejuvenate American democracy.

Innovations in Computerized Assessment Apr 17 2021 Computerized assessment offers many opportunities for innovations in measurement. In contrast to static paper-and-pencil instruments, computerized assessment can capitalize on the dynamic capabilities of the computer. For example, the difficulty of administered items can be adopted to the ability of the examinee, thus eliminating items that are too hard or too easy. Multimedia computers provide the opportunity to revolutionize assessment. Stereo sound, animation, and full-motion video can be incorporated into assessment tools and aid in the measurement of individual differences ranging from musical skills to interpersonal abilities. *Innovations in Computerized Assessment* presents the experiences of leading researchers in computerized assessment. The book places particular emphasis on the dilemmas that were faced by the researchers. Questions addressed include: * What problems did they confront? * What were the pros and cons of various options? * How were dilemmas resolved? * Were the solutions good ones?

Reduction of Environmental Distraction to Facilitate Cognitive Performance Apr 05 2020

When faced with a difficult task, people often look at the sky or close their eyes. This behavior is functional: the reduction of distractions in the environment can improve performance on cognitive tasks, including memory retrieval. Reduction of visual distractions can be operationalized through eye-closure, gaze aversion, or by comparing exposure to simple and complex visual displays, respectively. Reduction of auditory distractions is typically examined by comparing performance under quiet and noisy conditions. Theoretical reasoning regarding this phenomenon draws on various psychological principles, including embodied cognition, cognitive load, and modality-specific interference. Practical applications of the research topic are diverse. For example, the findings could be used to improve performance in forensic settings (e.g., eyewitness testimony), educational settings (e.g., exam performance), occupational settings (e.g., employee productivity), or medical settings (e.g., medical history reporting). This Research Topic welcomes articles from all areas of psychology relating to the reduction of distractions to improve task performance. Articles can address (but are not limited to) new empirical findings, comprehensive reviews, theoretical frameworks, opinion pieces, or discussions of practical applications.

The Weight of Their Votes Nov 05 2022 After the ratification of the Nineteenth Amendment in 1920, hundreds of thousands of southern women went to the polls for the first time. In *The Weight of Their Votes* Lorraine Gates Schuyler examines the consequences this had in states across the South. She shows that from polling places to the halls of state legislatures, women altered the political

landscape in ways both symbolic and substantive. Schuyler challenges popular scholarly opinion that women failed to wield their ballots effectively in the 1920s, arguing instead that in state and local politics, women made the most of their votes. Schuyler explores get-out-the-vote campaigns staged by black and white women in the region and the response of white politicians to the sudden expansion of the electorate. Despite the cultural expectations of southern womanhood and the obstacles of poll taxes, literacy tests, and other suffrage restrictions, southern women took advantage of their voting power, Schuyler shows. Black women mobilized to challenge disfranchisement and seize their right to vote. White women lobbied state legislators for policy changes and threatened their representatives with political defeat if they failed to heed women's policy demands. Thus, even as southern Democrats remained in power, the social welfare policies and public spending priorities of southern states changed in the 1920s as a consequence of woman suffrage.

[Testing Teacher Candidates](#) Aug 02 2022 Americans have adopted a reform agenda for their schools that calls for excellence in teaching and learning. School officials across the nation are hard at work targeting instruction at high levels for all students. Gaps remain, however, between the nation's educational aspirations and student achievement. To address these gaps, policy makers have recently focused on the qualifications of teachers and the preparation of teacher candidates. This book examines the appropriateness and technical quality of teacher licensure tests currently in use, evaluates the merits of using licensure test results to hold states and institutions of higher education accountable for the quality of teacher preparation and licensure, and suggests alternatives for developing and assessing beginning teacher competence. Teaching is a complex activity. Definitions of quality teaching have changed and will continue to change over time as society's values change. This book provides policy makers, teacher testers, and teacher educators with advice on how to use current tests to assess teacher candidates and evaluate teacher preparation, ensuring that America's youth are being taught by the most qualified candidates.
