Africa and Beyond Aug 29 2019 “Africa and Beyond: Arts and Sustainable Development is a massive undertaking by thoughtful theorists and practitioners in the creative/cultural industry. The combined effect of the volume is to disabuse the fixed, prevailing conception of the role of culture in society; a view that consigns the arts to the periphery of social life, devoid of any meaningful contribution to the alleviation of poverty and general development. Contrary to this view, the volume presents a more comprehensive, meaningful, insightful set of perspectives and paradigms that ascribe agency to creative/cultural products in all facets of human development. The usefulness of the volume extends beyond the industry itself. It is meant for a broader readership and is therefore highly recommended for specialists and the public at large.” – Professor Mokubung Nkomo,

Deputy Vice-Chancellor, Tshwane University of Technology, South Africa

Human rights in diverse education contexts Feb 02 2020 The focus of this publication is on answering the central research question: How can Human Rights be advanced with regard to different kinds of diversities, and in different educational settings? The publication pays special attention to the advancement of human rights in a variety of education-related contexts, in keeping with human rights as a declared national priority for both society at large and the education system. One strategic priority of the Faculty of Education is research based on market requirements and needs. This book strives towards meeting this expectation by directly aiming at building human rights and social justice in the South African society, public schools and higher education institutions. Adjudication in the education context of the constitutional values of dignity, equality and freedom focusses regularly on learners. The book highlights the value of education for full-fledged citizenship by delineating what schooling should entail to inspire learners towards both claiming equal freedoms and rights and taking accountability for the responsibilities attached to citizenship.

International Perspectives on Mathematics Curriculum Dec 02 2019 Curriculum can be defined in a variety of ways. It might be viewed as a body of knowledge, a product, or a process. Curricula can differ as they are conceptualized from various theoretical perspectives to address the needs of teachers, students, and the context of schooling. One reason to study curriculum is “to reveal the expectations, processes and outcomes of

students' school learning experiences that are situated in different cultural and system contexts. ... further studies of curriculum practices and changes are much needed to help ensure the success of educational reforms in the different cultural and system contexts" (Kulm & Li, 2009, p. 709). This volume highlights international perspectives on curriculum and aims to broaden the wider mathematics education community's understandings of mathematics curriculum through viewing a variety of ways that curricula are developed, understood, and implemented in different jurisdictions/countries. Within this volume, we define curriculum broadly as the set of mathematics standards or outcomes, the messages inherent in mathematics curriculum documents and resources, how these standards are understood by a variety of stakeholders, and how they are enacted in classrooms. The focus is on the written, implied, and enacted curriculum in various educational settings throughout the world.
