Heuristic Analysis of Large Trees as Generated in the Game of Go Jul 01 2022 The Japanese game of Go is of interest both as a problem in mathematical representation and as a game which generates a move tree with an extraordinarily high branching factor (100 to 300 branches per ply). The complexity of Go (and the difficulty of Go for human players) is thought to be considerably greater than that of chess. The constraints of being able to play a complete game and of being able to produce a move with a moderate amount of processing time were placed on the solution. The basic approach used was to find methods for isolating and exploring several sorts of relevant subsections of the global game tree. This process depended heavily on the ability to define and manipulate entities of Go as recursive functions rather than as patterns of stones. A general machine-accessible theory of Go was developed to provide context for program evaluations. A program for playing Go is now available on the Stanford PDP-10 computer. Did you know that a sword-billed hummingbird has a beak longer than its body, that a giant anteater's tongue can delve two feet into a termite mound in pursuit of food, or that a lion's mane jellyfish can grow tentacles as long as three buses? See how the most sublime animals on the planet size up and compare them all in one go using the enormous fold-out chart at the back of the book.

Large Deviations Techniques and Applications Aug 22 2021 Large deviation estimates have proved to be the crucial tool required to handle many questions in statistics, engineering, statistical mechanics, and applied probability. Amir Dembo and Ofer Zeitouni, two of the leading researchers in the field, provide an introduction to the theory of large deviations and applications at a level suitable for graduate students. The mathematics is rigorous and the applications come from a wide range of areas, including electrical engineering and DNA sequences. The second edition, printed in 1998, included new material on concentration inequalities and the metric and weak convergence approaches to large deviations. General

statements and applications were sharpened, new exercises added, and the bibliography updated. The present soft cover edition is a corrected printing of the 1998 edition.

Lend Me Your Ears Feb 25 2022 Caligula, William Shakespeare, Crazy Horse, and 1,500 other commentators from ancient Greek philosophers to Sarah Palin trade remarks profound, caustic, trenchant, and humorous in this entertaining omnibus. Lend Me Your Ears has a British tinge, but American pols are well represented. Middle and Far Eastern sources are sparsely included. Jay, coauthor of the BBC radio and television series Yes Minister and Yes Prime Minister, presents an eclectic assortment of bons mots alphabetically by author. Featuring some 300 quotations new to this edition, the book has an excellent keyword index. Jay's voracious pursuit of sources and discretion in selection are the linchpins that make this a valuable source. He notes in the introduction that "the number of new entries from earlier years is as large as ever, if not larger." Funeral orations, epitaphs, songs, cartoon captions, and slogans ("Burn, baby, burn") contribute to the hodgepodge. Both the pious (including Pius XII) and the rebarbative (Joseph McCarthy) have their say. Competing dictionaries of political maxims are largely nonexistent today. Some are attuned to American affairs, such as Wolfgang Mieder's Proverbs Are the Best Policy: Folk Wisdom and American Politics (2005). Other dictionaries compile the sayings of presidents, including Barack Obama in His Own Words (2007), edited by Lisa Rogak. Jay is especially adept at selecting scathing ripostes by both obscure and well-known British politicians, including Winston Churchill's comment on Stanley Baldwin: "The candle in that great turnip has gone out." Lend Me Your Ears invites readers to eavesdrop on Mark Twain, Sting, and Aeschylus. Summing Up: Highly recommended. All libraries; all levels. General Readers; Lower-division Undergraduates; Upper-division Undergraduates; Graduate Students; Researchers/Faculty; Two-year Technical Program Students; Professionals/Practitioners. Reviewed by C. B. Thurston.

Osteographia, Or the Anatomy of the Bones in Fifty-Six Plates by William Cheselden Every Bone in the Human Body Is Here Delineated As Large As the Life. This Work Was Executed in a Camera Obscura Contrived on Purpose by the Author. Jun 19 2021 The 18th century was a wealth of knowledge, exploration and rapidly growing technology and expanding record-keeping made possible by advances in the printing press. In its determination to preserve the century of revolution, Gale initiated a revolution of its own: digitization of epic proportions to preserve these invaluable works in the largest archive of its kind. Now for the first time these high-quality digital copies of original 18th century manuscripts are available in print, making them highly accessible to libraries, undergraduate students, and independent scholars. Medical theory and practice of the 1700s developed rapidly, as is evidenced by the extensive collection, which includes descriptions of diseases, their conditions, and treatments. Books on science and technology, agriculture, military technology, natural philosophy, even cookbooks, are all contained here. ++++ The below data was compiled from various identification fields in the bibliographic record of this title. Large-scale Experimental Test of Copper Sulfate as a Control for the Florida Red Tide Mar 29 2022 The first large-scale attempt at controlling the red tide was made in the autumn of 1957.

About 16 square miles stretching along 32 miles of shoreline from Anclote Key to Pass-a-grille Beach, off St. Petersburg, Florida, were dusted with copper sulfate ($\text{CuSO}_4 \cdot 5\text{H}_2\text{O}$) at about 20 pounds to the acre by crop-dusting planes. The copper very quickly reduced *Gyrodinium aureolum*, the red tide organisms, from several million to practically none per liter relieving the area of the respiratory irritation caused by the airborne toxin of *G. aureolum*. In 2 out of 5 areas the organisms rose again to concentrations lethal to fish in 10 to 14 days after dusting. This method is not recommended for general control, but will give temporary relief in local situations from the airborne toxin
