Oxford Handbooks offer authoritative and up-to-date reviews of original research in a particular subject area. Specially commissioned chapters from leading figures in the discipline give critical examinations of the progress and direction of debates, as well as a foundation for future research. Oxford Handbooks provide scholars and graduate students with compelling new perspectives on a wide range of subjects in the humanities, social sciences, and sciences. Book jacket.

**Annual Reports in Inorganic and General Syntheses-1975** Oct 31 2022  
Annual Reports in Inorganic and General Syntheses-1975 presents an annual review of synthetically useful information that would prove beneficial to nearly all organic chemists, both specialist and nonspecialist in synthesis. It should help relieve some of the information storage burden

of the specialist and should aid the nonspecialist who is seeking help with a specific problem to become rapidly aware of recent synthetic advances. This is the fourth volume of "ARIGS" and is organized along the lines used for the last volume. The authors were encouraged to use synthetic aspects as their primary guideline for the arrangement and preservation of the information; however, an occasional deviation to include structural or mechanistic features seemed to be justified in order to reflect the particular features of a given element's chemistry. Complex hydrides were dealt with under the particular elements. As a consequence there is no chapter on simple and complex metal hydrides of main groups I, II, and III in the present volume. As in previous issues of ARIGS, this volume presents an article of a timely subject of special interest. This year's special feature is the "Synthesis of Radiopharmaceuticals by the Reduction of 99m TcO<sub>4</sub>-."

*E-Business and Telecommunications* Mar 24 2022

This book contains a compilation of the revised and extended versions of the best papers presented at the 16th International Joint Conference on E-Business and Telecommunications, ICETE 2019, held in Prague, Czech Republic, in July 2019. ICETE is a joint international conference integrating four major areas of knowledge that are divided into six corresponding conferences: International Conference on Data Communication Networking, DCNET; International Conference on E-Business, ICE-B; International Conference on Optical Communication Systems, OPTICS; International Conference on Security and Cryptography, SECRIPT; International Conference on Signal Processing and Multimedia, SIGMAP; International Conference on Wireless Information Systems, WINSYS. The 11 full papers presented in the volume were carefully reviewed and selected from the 166 submissions. The papers cover the following

key areas of data communication networking, e-business, security and cryptography, signal processing and multimedia applications.

**Nuclear Science Abstracts** Jul 16 2021 NSA is a comprehensive collection of international nuclear science and technology literature for the period 1948 through 1976, pre-dating the prestigious INIS database, which began in 1970. NSA existed as a printed product (Volumes 1-33) initially, created by DOE's predecessor, the U.S. Atomic Energy Commission (AEC). NSA includes citations to scientific and technical reports from the AEC, the U.S. Energy Research and Development Administration and its contractors, plus other agencies and international organizations, universities, and industrial and research organizations. References to books, conference proceedings, papers, patents, dissertations, engineering drawings, and journal articles from worldwide sources are also included. Abstracts and full text are provided if available.

**Finite Element Methods and Their Applications** Nov 19 2021

Introduce every concept in the simplest setting and to maintain a level of treatment that is as rigorous as possible without being unnecessarily abstract. Contains unique recent developments of various finite elements such as nonconforming, mixed, discontinuous, characteristic, and adaptive finite elements, along with their applications. Describes unique recent applications of finite element methods to important fields such as multiphase flows in porous media and semiconductor modelling. Treats the three major types of partial differential equations, i.e., elliptic, parabolic, and hyperbolic equations.
