Origami Peace Cranes Dec 26 2021 ****Winner Creative Child Magazine 2018 Preferred Choice Award****
Origami Peace Cranes is a multicultural children's book about the capacity for friendship in all of us, and the power of small, but meaningful actions. When Emma moves to a new town, she's afraid she'll never make friends. She tries her hardest to make a good impression on her new classmates. Through a paper crane origami project, her classmates show her that they really want to get to know her. Later, when a new family moves into her neighborhood, Emma has a great idea how to make them feel welcome! Filled with fun

pictures and ideas, this story addresses the anxiety that comes with new beginnings and introduces kids to moving, making new friends, and starting at a new school. This book also includes: Step-by-step instructions for making a paper crane 12 sheets of printable origami paper, so that kids can make their own cranes to share! Proceeds support the Peace Crane Project--originally created for the United Nations International Day of Peace, it aims to expand students' understanding of and appreciation for other cultures, people and countries.

Automation 2022 Oct 12 2020 This book presents the unique result of discussion among interdisciplinary specialists facing recent industrial and economic challenges. It contains papers authored by both scientists and practitioners focused on an interdisciplinary approach to developing measuring techniques, robotic and mechatronic systems, industrial automation, numerical modelling and simulation, and application of artificial intelligence techniques required by the transformation leading to Industry 4.0. We strongly believe that the solutions and guidelines presented in this book will be useful to both researchers and engineers facing problems associated with developing cyber-physical systems for global development.

Intelligent Human Systems Integration Dec 14 2020 This book reports on research on innovative human systems integration and human-machine interaction, with an emphasis on artificial intelligence and automation, as well as computational modeling and simulation. It covers a wide range of applications in the area of design, construction and operation of products, systems and services, including lifecycle development

and human-technology interaction. The book describes advanced methodologies and tools for evaluating and improving interface usability, new models, as well as case studies and best practices in virtual, augmented and mixed reality systems, with a special focus on dynamic environments. It also discusses different factors concerning the human, hardware, and artificial intelligence software. Based on the proceedings of the 1st International Conference on Intelligent Human Systems Integration (IHSI 2018), held on January 7-9, 2018, in Dubai, United Arab Emirates, the book also examines the forces that are currently shaping the nature of computing and cognitive systems, such as the need for decreasing hardware costs; the importance of infusing intelligence and automation, and the related trend toward hardware miniaturization and power reduction; the necessity for a better assimilation of computation in the environment; and the social concerns regarding access to computers and systems for people with special needs. It offers a timely survey and a practice-oriented reference guide to policy- and decision-makers, human factors engineers, systems developers and users alike.

China Standard: GB/T 3811-2008 Design Rules for Cranes Jan 15 2021 This standard defines the required rules that must be complied with in the designs of complete machine, structure, mechanism, electrics, safety of cranes, and specifies the design and calculation requirement / method. This standard may be regulated as the technical base of analysis and assessment. The standard is applicable to overhead type crane, jib type crane and cable type crane, but doesn't refer to the special design problem of the above cranes. This standard may be referenced as for the design of other cranes.

Aspects of Computational Intelligence: Theory and Applications Jul 09 2020 This volume covers the state-of-the-art of the research and development in various aspects of computational intelligence and gives some perspective directions of development. Except the traditional engineering areas that contain theoretical knowledge, applications, designs and projects, the book includes the area of use of computational intelligence in biomedical engineering. „Aspects of Computational Intelligence: Theory and Applications“ is a compilation

of carefully selected extended papers written on the basis of original contributions presented at the 15th IEEE International Conference on Intelligence Engineering Systems 2011, INES 2011 held at June 23.-26. 2011 in AquaCity Poprad, Slovakia.
