[Manual of Definitive Surgical Trauma Care 2E](#) Aug 22 2021 Unless dealing with injury regularly, few surgeons can attain and sustain the level of skill necessary for decision making in major trauma. This includes both the intellectual decisions and the manual dexterity required to perform all the manoeuvres needed for surgical access and control. These can be particularly challenging, and may be infrequently required, yet rapid access to and control of sites of haemorrhage following trauma can be life-saving surgical intervention. Many situations require specialist trauma expertise, yet often this is simply not on hand within the available time frame. Manual of Definitive Surgical Trauma Care, Second Edition, is written by the editorial board of the DSTCTM, which is a short course focusing on the life-saving surgical techniques and surgical decision-making required for surgeons who deal with major surgical trauma

on an infrequent basis. This course supplements the well-recognized and accepted American College of Surgeons' Advanced Trauma Life Support (ATLS®) course. This manual is published in association with IATLSIC (the International Association for the Surgery of Trauma and Surgical Intensive Care), and is written by an Editorial Board of surgeons who belong to that society. IATLSIC are broadening their reach and running more and more courses worldwide. This new second edition has been updated to incorporate all recent developments in this rapidly progressing area. It emphasizes how practical 'real-life' decisions on the care of the injured patient should be made and then covers in practical terms the surgical techniques required. Every aspect of surgical trauma care is covered, including: ·the causation of injuries - aids rapid understanding of presented trauma; ·the initial, pre-hospital and emergency department care of the patient - all of which may determine eventual outcome; ·the resources required, both physical and intellectual, within the hospital to deal with the specific problems associated with patients with multiple injuries; the limitations in providing specialist expertise within the time frame required. It is an ideal practical manual for both trainees and qualified surgeons.

Abdominal Trauma Mar 29 2022 Trauma to the abdomen, both accidental and willful, has become increasingly common in this era of increasing violence. Large numbers of patients all over the country are admitted to emergency rooms because of abdominal trauma of varying degrees of severity. All too often the correct diagnosis is suspected belatedly or not at all, so that proper treatment is not initiated in sufficient time to be lifesaving. Not infrequently, the injured patient is examined by an intern or an insufficiently experienced resident physician. Even in instances where more senior internists and surgeons are available, detailed knowledge about the necessary methodology to establish the correct diagnosis and institute the appropriate treatment is lacking. This monograph, representing the felicitous collaboration of a surgeon and a radiologist together with several other contributors, is timely and important. The authors (and their contributors) have approached their subject with a wealth of clinical experience obtained in several very active acute-care municipal hospitals in the largest city in this country. They have observed and treated a very large number of patients with a multitude of traumatic causes, including firearm injuries, stab wounds, vehicular accidents, falls, and assaults. The authors have divided this work into four main sections: General Perspectives on Abdominal Injury, Types of Abdominal Injuries, Specific Diagnostic Techniques, and Specific Organ or Supporting-Structure Injury.

Abdominal Trauma, Peritoneum, and Retroperitoneum Sep 03 2022 Over the last two decades, there have been major advances in imaging, endoscopy, and laparoscopy in the field of gastrointestinal (GI) surgery. GI surgery is the newest sub-specialty branch of general surgery, where enhanced expertise and high-volume centres have made a difference to the outcomes of complex operations. Surgeons can now perform difficult procedures with low morbidity and mortality rates, and greatly improved overall results. This volume provides detailed and up-to-date information on diseases of the mesentery, omentum, peritoneum, and retroperitoneum as well as abdominal trauma. As an area of surgery that may often be neglected in traditional teaching, with limited resources to aid clinical decision making, diseases and trauma in this area can lead to situations where even the most experienced surgeon may feel challenged. Managing patients with these diseases successfully warrants a comprehensive knowledge of their anatomy and physiology as well as the pathology involved. The book provides comprehensive coverage of the different conditions and traumas, and includes a final chapter covering abdominal surgery during the COVID-19 pandemic. Written and edited by international experts in the field, this book will be a valuable resource for abdominal, peritoneum and retroperitoneum surgeons and trainees, general surgeons, researchers, and medical students.
