Small Worlds Jul 29 2019 Small Worlds examines the minimalist trend in French writing, from the early 1980s to the present. Warren Motte first considers the practice of minimalist in other media, such as the plastic arts and music, and then proposes a theoretical model of minimalist literature. Subsequent chapters are devoted to the work of a variety of contemporary French writers and a diversity of literary genres. In his discussion of minimalism, Motte considers smallness and simplicity, a reduction of means (and the resulting amplification of effect), immediacy, directness, clarity, repetition, symmetry, and playfulness. He argues that economy of expression offers writers a way of renovating traditional literary forms and allows them to represent human experience more directly. Motte provides close readings of novels by distinguished contemporary French writers, including Edmond Jabes, Annie Ernaux, Herve Guibert, Marie Redonnet, Jean Echenoz, Olivier Targowla, and Emmanuele Bernheim, demonstrating that however diverse their work may otherwise be, they have all exploited the principle of formal economy in their writing. Warren Motte is a professor of French at the University of Colorado, Boulder. Playtexts: Ludics in Contemporary Literature (Nebraska 1995) is his most recent book.

A Small World Sep 03 2022 Conceived in the 1960s, Walt Disney's original plans for his Experimental Prototype Community of Tomorrow (EPCOT) outlined a utopian laboratory for domestic technology, where families would live, work, and play in an integrated environment. Like many of his contemporaries, Disney imagined homes that would attend to their inhabitants' every need, and he regarded the home as a site of unending technological progress. This fixation on "space-age" technology, with its promise of domestic bliss, marked an important mid-twentieth-century shift in understandings of the American home. In A Small World, Davin Heckman considers how domestic technologies that free people to enjoy leisure time in the home have come to be understood as necessary parts of everyday life. Heckman's narrative stretches from the early-twentieth-century introduction into the home of electric appliances and industrial time-management techniques, through the postwar advent of television and the space-age "house of tomorrow," to the contemporary automated, networked "smart home." He considers all these developments in relation to lifestyle and consumer narratives. Building on the tension between agency and control within the walls of homes designed to anticipate and fulfill desires, Heckman engages debates about lifestyle, posthumanism, and rights under the destabilizing influences of consumer technologies, and he considers the utopian and dystopian potential of new media forms. Heckman argues that the achievement of an environment completely attuned to its inhabitants' specific wants and needs—what he calls the "Perfect Day"—institutionalizes everyday life as the ultimate consumer practice.

Intelligent Robotics and Applications Jun 27 2019 The market demand for skills, knowledge and adaptability have positioned robotics to be an important field in both engineering and science. One of the most highly visible applications of robotics has been the robotic automation of many industrial tasks in factories. In the future, a new era will come in which we will see a greater success for robotics in non-industrial environments. In order to anticipate a wider deployment of intelligent and autonomous robots for tasks such as manufacturing, healthcare, ent- tainment, search and rescue, surveillance, exploration, and security missions, it is essential to push the frontier of robotics into a new dimension, one in which motion and intelligence play equally important roles. The 2010 International Conference on Intelligent Robotics and Applications (ICIRA 2010) was held in Shanghai, China, November 10–12, 2010. The theme of the c- ference was "Robotics Harmonizing Life," a theme that reflects the ever-growing interest in research, development and applications in the dynamic and exciting areas of intelligent robotics. These volumes of Springer's Lecture Notes in Artificial Intel- gence and Lecture Notes in Computer Science contain 140 high-quality papers, which were selected at least for the papers in general sessions, with a 62% acceptance rate Traditionally, ICIRA 2010 holds a series of plenary talks, and we were fortunate to have two such keynote speakers who shared their expertise with us in diverse topic areas spanning the rang of intelligent robotics and application activities.
