The Pollinator Victory Garden Dec 02 2019 The passion and urgency that inspired WWI and WWII Victory Gardens is needed today to meet another threat to our food supply and our environment—the steep decline of pollinators. The Pollinator Victory Garden offers practical solutions for winning the war against the demise of these essential animals. Pollinators are critical to our food supply and responsible for the pollination of the vast majority of all flowering plants on our planet. Pollinators include not just bees, but many

different types of animals, including insects and mammals. Beetles, bats, birds, butterflies, moths, flies, and wasps can be pollinators. But, many pollinators are in trouble, and the reality is that most of our landscapes have little to offer them. Our residential and commercial landscapes are filled with vast green pollinator deserts, better known as lawns. These monotonous green expanses are ecological wastelands for bees and other pollinators. With *The Pollinator Victory Garden*, you can give pollinators a fighting chance. Learn how to transition your landscape into a pollinator haven by creating a habitat that includes pollinator nutrition, larval host plants for butterflies and moths, and areas for egg laying, nesting, sheltering, overwintering, resting, and warming. Find a wealth of information to support pollinators while improving the environment around you:

- The importance of pollinators and the specific threats to their survival
- How to provide food for pollinators using native perennials, trees, and shrubs that bloom in succession
- Detailed profiles of the major pollinator types and how to attract and support each one
- Tips for creating and growing a Pollinator Victory Garden, including site assessment, planning, and planting goals
- Project ideas like pollinator islands, enriched landscape edges, revamped foundation plantings, meadowscapes, and other pollinator-friendly lawn alternatives

The time is right for a new gardening movement. Every yard, community garden, rooftop, porch, patio, commercial, and municipal landscape can help to win the war against pollinator decline with *The Pollinator Victory Garden*.

The Invisible Farm Mar 29 2022 The nature of rural life and food production is changing dramatically but remains overlooked by the major media. *The Invisible Farm* provides the first substantial accounting of this problem, addressing issues such as habitat destruction, loss of biodiversity, pollution, and soil degradation. Pawlick supplies readers with frightening examples of events taking place worldwide without public awareness. As these environmental problems get worse, farm reporters are disappearing from newspapers and television. Rural news and environmental issues are increasingly neglected. Pawlick argues that this lack of interest is partly due to less agricultural journalism training at universities. As a result, massive changes in farming, distribution, and production continue unabated while the consuming public is left uninformed. A Burnham Publishers book

A Garden for the Rusty-Patched Bumblebee Feb 25 2022 Support biodiversity with this practical guide to creating habitat gardens for native pollinators in Southern Ontario. Saving the bees is an environmental cause that resonates deeply with Canadians. While much of the popular focus is on honeybees, an introduced species, many people are largely unaware of the importance of native bees. These pollinators are of crucial importance and are threatened by climate change, habitat loss and fragmentation, and disease and competition from non-native species and modern intensive agriculture. *A Garden for the Rusty-Patched Bumblebee* provides all the information needed for gardeners to take action to support and protect pollinators—by creating habitat in yards and communal spaces, and on balconies and rooftops. There are approximately 400 species of native bees in Ontario, including bumblebees, sweat bees, mining bees, cuckoo bees, leafcutter bees and cellophane bees. This book introduces and deepens the concept of pollinator gardening—creating gardens that help bees thrive—by exploring specialist relationships. For example, the native-to-Ontario sweat bee *Lasioglossum oenotherae* specializes in pollen from the native evening primrose plant. With plant recommendations specific to Southern Ontario, as well as useful garden designs and numerous tips for success, this compact, full-colour guide will enable gardeners to discover the crucial connections between native plants and native pollinators—and learn how to cultivate their own patch of pollinator paradise.

The Natural Treasures of Carolinian Canada Jun 27 2019 Sweeping from Toronto to Lake Huron and Lake Erie is a region of biological richness unmatched in Canada. Here the native trees have unusual names -- Sassafras, Cucumber Magnolia, Tulip-tree, Black Walnut, Pawpaw -- evoking the distinctly southern character for which the region is named. The zone is also home to dozens of species of plants, grasses and wildflowers, as well as animals, birds, fishes and mussels, amphibians and reptiles, butterflies, dragonflies and other insects not found elsewhere in Canada. The Carolinian region is only a quarter of a percent of the country's total land area, but close to one-third of Canada's rare and endangered plants and animals live here. So does more than a quarter of the country's population. Many unique species depend on the region's distinctive habitats, many of them also in jeopardy. The Carolinian landscape is one of the most threatened in North America. This book is a labour of love for the contributors, naturalists and scientists who share their knowledge of the diverse richness and rarity of the species and spaces in Carolinian Canada through engaging and informative text.
