**Events Design and Experience** Sep 22 2021 For the first time Events Design and Experience draws together the relationship between event design and the experience of consumers and participants. It explores and analyses the event experience of the individual and how this can be 'controlled' by design. By drawing upon ongoing research conducted over several years into the experiences of groups and individuals who attend events this text will ask questions such as: What was the rationale behind a particular event being designed in a certain way? What was the actual experience of consumers? How was the event materially delivered and did the experience created provide a satisfactory outcome? How can experiences be understood (via semiotics) especially the physical elements of an event? Structured in four sections, Events Design and Experience discusses: \* What are events? An overall view of the industry, its definitions and market demand. It also covers an analysis of previous literature, and draws upon real life events such as Wembley plc, Leapfrog Corporate events and the British Cycling federation \* What is an event experience? An explanation of the nature and stages of experience, and the emergence of the experience industry itself. Cases such as the Proms, London Fashion week and the Nike Fun run are used to illustrate. \* Designing Experiences. Considers how design itself can impact upon the experience, in some cases fundamentally changing the nature of experience. It asks the question of how experiences are designed and what do they signify to the customer once complete. \* Analysing Event Experiences. Considers how experiences can be analysed and evaluated looking at the artificiality of the event and how this reflects in the experience of consumers. Also includes a review of the psychological processes of

perception and interpretation and how meaning and experience can be analysed, and how we may begin to unravel the meanings attributed to certain events. With international case studies throughout, *Events Design and Experience* has a coherent user-friendly structure including chapter summaries, review exercises and topics for discussion to consolidate understanding.

**Assaulted Personhood** Jul 09 2020 In 21st century America, personhood is under daily assault, sometimes with dire consequences. Scientist, ethicist, and ordained minister Craig C. Malbon encourages the reader to consider such assaults on personhood endured by victims of abortion, ageism, Alzheimer's disease, drug addiction, mental and physical disabilities, gender, gender orientation, racism, sexual preference, identity politics, and our will-to-power over the "other." In exploring personhood status, Malbon poses difficult questions for us. Is personhood assigned as all-or-nothing, or is it a sliding scale based upon criteria arbitrarily aimed at our vulnerabilities? Does the voiceless embryo and fetus have advocates who can speak to the moral question of abortion? Is the personhood of an economically insecure pregnant woman degraded to the point where lack of access to early termination of pregnancy results in "coercive childbearing?" Does being a member of the LGBTQI+ community target one for assaults on personhood, to the extreme of being killed? In delving into the biology and psychology of assaults of "self" upon the "other," Malbon sees powerful linkages of everyday assaults on personhood to darker, profound "original sins" that are foundational to the rise of the American empire, i.e., assaults on the indigenous Native Americans and assaults derivative to the institution of slavery upon Africans, African Americans, and their descendants.

**The Embodied Mind, revised edition** Aug 29 2019 A new edition of a classic work that originated the “embodied cognition” movement and was one of the first to link science and Buddhist practices. This classic book, first published in 1991, was one of the first to propose the “embodied cognition” approach in cognitive science. It pioneered the connections between phenomenology and science and between Buddhist practices and science—claims that have since become highly influential. Through this cross-fertilization of disparate fields of study, *The Embodied Mind* introduced a new form of cognitive science called “enaction,” in which both the environment and first person experience are aspects of embodiment. However, enactive embodiment is not the grasping of an independent, outside world by a brain, a mind, or a self; rather it is the bringing forth of an interdependent world in and through embodied action. Although enacted cognition lacks an absolute foundation, the book shows how that does not lead to either experiential or philosophical nihilism. Above all, the book's arguments were powered by the conviction that the sciences of mind must encompass lived human experience and the possibilities for transformation inherent in human experience. This revised edition includes substantive introductions by Evan Thompson and Eleanor Rosch that clarify central arguments of the work and discuss and evaluate subsequent research that has expanded on the themes of the book, including the renewed theoretical and practical interest in Buddhism and mindfulness. A preface by Jon Kabat-Zinn, the originator of the mindfulness-based stress reduction program, contextualizes the book and describes its influence on his life and work.
