Conservation genetics of endangered horse breeds Apr 05 2020 This book is particularly interesting for both horse breeders and molecular geneticists. Equids (horses and asses) have a particular place in the human culture and history. There are strong arguments for conservation of rare, endangered horse breeds and populations, however the maintenance of native breeds does not result in profitable business. Some populations and namely rare horse breeds need to be re-evaluated yet, others need to be saved from extinction very urgently. Enlisting the aid of modern science gives us many tools for reaching decisions to realize the preservation of different rare populations and not to use solely pedigrees, conformation and historical data. The molecular genetic approach and the phenotypic estimation of the values of different breeds is more and more useful. Hence, it was the right time for Horse Commission of EAAP together with Rare Breeds International (RBI) to perform a session devoted to the topic of progress in molecular genetics of horses. This book summarizes the papers on molecular genetic description of horse breeds and some aspects of evolution of horse species. The Medieval Horse and Its Equipment, C.1150 - C.1450 Jul 01 2022 Whether knight's charger or beast of burden, horses played a vital role in medieval life. The wealth of medieval finds excavated in London in recent years has, not surprisingly, included many objects associated with horses. This catalogue illustrates and discusses over four hundred such objects, among them harness, horseshoes, spurs and curry combs, from the utilitarian to highly decorative pieces. London served by horse traffic comes vividly in view. The introductory chapter draws on historical as well as archaeological sources to consider the role of the horse in medieval London. It looks at the price of horses and the costs of maintaining them, the hiring of 'hackneys' for riding, the use of carts in and around London, and the work of the 'marshal' or farrier. It discusses the evidence for the size of medieval horses and includes a survey of finds of medieval horse skeletons from London. It answers the key questions, how large a 'Great Horse' was, and why it took three horses to pull a cart. A new introduction to this edition provides an update on research and a supplementary bibliography. This is a basic work of reference for archaeologists and those studying medieval artefacts, and absorbing reading for everyone interested in the history of the horse and its use by humankind. JOHN CLARK is Curator (Medieval) at the Museum of London.

The Horse in the Ancient World Jun 27 2019 The domestication of the horse in the fourth

millennium BC altered the course of mankind's future. Formerly a source only of meat, horses now became the prime mode of fast transport as well as a versatile weapon of war. Carolyn Willekes traces the early history of the horse through a combination of equine iconography, literary representations, fieldwork and archaeological theory. She explores the ways in which horses were used in the ancient world, whether in regular cavalry formations, harnessed to chariots, as a means of reconnaissance, in swift and deadly skirmishing (such as by Scythian archers) or as the key mode of mobility. Establishing a regional typology of ancient horses - Mediterranean, Central Asian and Near Eastern - the author discerns within these categories several distinct sub-types. Explaining how the physical characteristics of each type influenced its use on the battlefield - through grand strategy, singular tactics and general deployment - she focuses on Egypt, Persia and the Hittites, as well as Greece and Rome. This is the most comprehensive treatment yet written of the horse in antiquity.
