Westland Wessex Manual May 07 2020 With a full and active service life of more than 40 years with the Royal Navy and the RAF, the Westland Wessex was one of the most versatile helicopters of the Cold War era. As a British-built turbine-powered development of the American Sikorsky H-34, the Westland Wessex was developed and produced under license by Westland Aircraft (later Westland Helicopters). One of the main differences from Sikorsky's H-34 was the replacement of the piston-engine power plant with a turboshaft engine. The Wessex was the first helicopter to be produced in large numbers that made use of a gas turbine engine. Early models were powered by a single Napier Gazelle engine, while later builds used a pair of Rolls-Royce Gnome engines.

Gas and Petroleum Engines, Vol. 1 Mar 17 2021 Excerpt from Gas and Petroleum Engines, Vol. 1: A Manual for Students and Engineers The success of the first edition has encouraged me to prepare this new book with the original aim to aid engineer ing students and engineers in studying Gas and Petroleum Engines, and the principles that. Underlie and control their action, so as to put the practical man in a position to test the performance of these engines, and to make an intelligent use of his own observations. Experience in teaching engineering students has led me to endeavour, by a simple, detailed treat ment, to make the work useful as a text-book on the subject. Brief historical notes trace the evolution of the internal combustion engine from the crude gunpowder engine to modern gas and oil engines. The main features and details of the chief types of motors established in common use are shown by many illustrations, with description of the action and trials of each engine. A special chapter has been added on petroleum - oil and spirit - engines. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
