The Patchwork of World History in Texas High Schools Sep 17 2021 This book traces the historical development of the World History course as it has been taught in high school classrooms in Texas, a populous and nationally influential state, over the last hundred years. The author argues that the course has dynamically evolved to reflect a patchwork of competing visions that have intersected over the past century, with each new framework partially but never completely erasing or replacing those that came before. The first part of the book presents an overview of the World History course supported by a numerical analysis of textbook content and public documents, whilst the second focuses on the depiction of non-Western peoples, and persistent narratives of Eurocentrism, imperialism, and nationalism. It ultimately concludes that a more global, accurate, and balanced curriculum is possible, despite the tension between the ideas of professional world historians, who often de-center the nation-state in their quest for a truly global approach to the subject, and the historical core rationale of state-sponsored education in the United States: to produce loyal citizens. Offering a new, conceptual understanding of how colonial themes in world history curriculum have been dealt with in the past and are now engaged with in contemporary times, it provides essential context for scholars and educators with interests in the history of education, curriculum studies, and the teaching of World History in the United States.

Texas Jography! Mar 12 2021 Texas Geography-Statistics say most kids know less geography than ever-don't let that apply to your students! Start by making sure kids know the main places & geographic features in their own state. Give them activities that pretend they are taking a cross-state bike tour, using free football game passes, jogging through the state, etc., & they'll find their way around in a hurry! Geography activities include information on counties, rivers, museums, historic places, sites of interest, colleges, bordering states, climate, topography, crops and more, all ready to reproduce! Approximately 30 activities and 200 geography related places and facts are covered. Students work alone or in groups and use maps, reference books or resource people to complete challenging riddles, matching games, word searches, fill-in lists, scavenger hunts, and completion exercises that reinforce learning, sharpen research skills, and provide a lively introduction to Texas.

How to Meet Standards, Motivate Students, and Still Enjoy Teaching! Feb 08 2021 Barbara P. Benson introduces a system of teaching and learning that both teacher and students can benefit from. The system is based on four practices and these are integrated with tests.

Digital Geography Oct 19 2021 The purpose of this volume is to provide a review and analysis of the theory, research, and practice related to geospatial technologies in social studies education. In the first section, the history of geospatial technologies in education, the influence of the

standards movement, and the growth of an international geospatial education community are explored. The second section consists of examples and discussion of the use of geospatial technologies for teaching and learning history, geography, civics, economics, and environmental science. In the third section, theoretical perspectives are proposed that could guide research and practice in this field. This section also includes reviews and critiques of recent research relevant to geospatial technologies in education. The final section examines the theory, research, and practice associated with teacher preparation for using geospatial technologies in education.

Neoliberalizing Educational Reform Oct 26 2019 "In this era, when 'commonsense' in educational discourse is so deeply framed by neoliberalism, we must better understand both the uniquely situated and the insidiously interconnected nature of so-called reforms. Thank you to Keith M. Sturges and colleagues for illuminating exactly this in their important and hard-hitting new book that reveals not merely how neoliberal reforms are designed to reinforce inequity, but also how the contradictions within provide ample opportunity to collectivize and act with hope." – Kevin Kumashiro, author of *Bad Teacher!: How Blaming Teachers Distorts the Bigger Picture* "In this important volume, editor Keith M. Sturges has taken the most useful discussions of neoliberalism and – with great precision, clarity and utility – seen them applied to the education arena. Over 13 chapters, leading education thinkers lay bare sets of realities that the broader public, school administrators, and policy makers would do well to fully understand. These range from the impact of neoliberal thinking upon chartering, parent involvement, teacher training, school climate, funding and more. I'll be using the chapters in this text in a variety of ways. They'll inform conversations with local, state and federal policy makers, and inform conversations with school leaders and district leaders. I'll also be assigning the text in my graduate seminar on education policy. Finally, the chapters will inform several lectures in my undergraduate class on 'The Promise and Peril of Public Education.' What a gem of a volume!" – Kevin Michael Foster, Executive Director, The Institute for Community, University and School Partnerships (ICUSP)

Border Politics in a Global Era Jul 16 2021 Initially, research in border studies relied mainly on generalizations from cases in the US-Mexico borderlands before subsequently burgeoning in Europe. *Border Politics in a Global Era* seeks to expand the study further to include the post-colonial South in response to the major challenge of interdisciplinary border studies: to explore borderlands in many contexts, with and across a variety of states, including the so-called developing, post-colonial states. Culled from decades of firsthand observations of borders from around the world and written with a critical and gender lens, the text is framed with attention to history, geography, and the power of films and travelogues to represent people as "others." Professor Kathleen Staudt advances border concepts, categories, and theories to focus on trade, migration, and security highlighting the importance of states, their length of time since independence, and border bureaucrats' discretionary practices. Drawing on her Border Inequalities Database for a global perspective, Staudt calls for reducing inequalities and building institutions in the common grounds of borderlands. The book features maps and other visuals with lists of links at the close of most chapters. Broadly comparative in nature, *Border Politics in a Global Era* will appeal not only to students of border studies; it will also stimulate attention in comparative politics, international studies, and political geography.

Teaching Sustainability Sep 25 2019 "American colleges and universities have been relatively quick to address the challenge of sustainability in operations. Ironically, they have been slower to respond in regard to their core mission: educating students. Teaching sustainability aims to redress this shortcoming by opening doors to education for sustainability in the humanities and social sciences. The essays in this collection are richly diverse. They investigate ways sustainability education "pushes back" against traditional disciplines while it simultaneously benefits

from the perspectives and skills these fields have to offer. They also address "big questions" such as how to make education meaningful, how to examine hidden assumptions underlying current curricula, and how a focus on sustainability can answer critics of contemporary higher education. The heart of teaching sustainability is reflection and advice on pedagogy. From these richly diverse case studies important common themes emerge: the "symbiotic relationship" between classroom and campus operations; techniques for transforming the campus itself from merely a setting to a "learning laboratory;" and the potential of community partners for teaching sense of place. An equally significant theme is the overlap between sustainability education and emerging best practice in pedagogy. Essays on theory and practice, individual and collaborative projects, service learning, and consequential activities, all exemplify how sustainability and deep learning go hand and hand. Like sustainability itself, the volume infuses theory with practical application. The contributors demonstrate the ways in which a single course can serve as a powerful change agent for an entire campus, how to build bridges between faculty and administrators, and even how to move forward on modest budgets. The authors themselves constitute a network of advisors." -- Publisher's description

Advances in Community Thought and Research Dec 29 2019 The collection of papers in this volume have a combined synergy that exudes a sense of hope and confidence that our progress in the Professional Development Schools research movement has been substantial and vibrant, even though some would argue that the strides are not enough nor fast enough to make a significant difference. However, no one can argue the fact that our efforts are indeed crucial to the improvement of education for all students and in that sense, Professional Development Schools Research is definitely on track.

Doing Race in Social Studies Aug 29 2022 Race and racism are a foundational part of the global and American experience. With this idea in mind, our social studies classes should reflect this reality. Social studies educators often have difficulties teaching about race within the context of their classrooms due to a variety of institutional and personal factors. *Doing Race in Social Studies: Critical Perspectives* provides teachers at all levels with research in social studies and critical race theory (CRT) and specific content ideas for how to teach about race within their social studies classes. The chapters in this book serve to fill the gap between the theoretical and the practical, as well as help teachers come to a better understanding of how teaching social studies from a CRT perspective can be enacted. The chapters included in this volume are written by prominent scholars in the field of social studies and CRT. They represent an original melding of CRT concepts with considerations of enacted social studies pedagogy. This volume addresses a void in the social studies conversation about race—how to think and teach about race within the social science disciplines that comprise the social studies. Given the original nature of this work, *Doing Race in Social Studies: Critical Perspectives* is a much-needed addition to the conversation about race and social studies education.
