Procedural and declarative information in software manuals Nov 05 2022 People who use software manuals want to get something done. Procedural information directly supports this goal, but the use of declarative information in manuals has often been under

discussion. Current research gives rise to the expectation that manual users tend to skip declarative information most of the time. Also, no effects of declarative information in software manuals have yet been found. In this study, information use and information effects in software manuals are investigated in three experiments, thereby taking different user types, different task types and different information arrangements into account. A new technique was applied: the click&read method. This technique enables the software user to use the manual and carry out software tasks at the same time while information selection and times are recorded automatically in logfiles. For the first time, quantitative data are presented about the amounts of procedural and declarative information that were selected and the times that were spent using these information types. Although procedural information is selected more often and used longer, declarative information appears to be a substantial part of the information selection. Moreover, the results show that using declarative information positively affects performance on future tasks, performance on reasoning tasks and factual knowledge.

Advances in Nanofibre Research Sep 22 2021 Nanofibres are defined as fibres with diameters on the order of 100 nanometres. They can be produced by interfacial polymerisation and electrospinning. Nanofibres are included in garments, insulation and in energy storage. They are also used in medical applications, which include drug and gene delivery, artificial blood vessels, artificial organs and medical facemasks. This book presents some fascinating phenomena associated with the remarkable features of nanofibres in electrospinning processes and new progress in applications of electrospun nanofibres. It also provides an overview of structure-property relationships, synthesis and purification, and potential applications of electrospun nanofibres. The collection of topics in this book aims to reflect the diversity of recent advances in electrospun nanofibres with a broad perspective which may be useful for scientists as well as for graduate students and engineers.
